Plusminus The New Era of Lighting

Design by Diez Office

Plusminus is a lighting system that provides architects and lighting designers the opportunity of customising light to illuminate all kinds of interior spaces. **Vibia**, together with **Stefan Diez** has come up with a bespoke collection that features a fabric belt and various light fittings to lend individual sensibility through contemporary technology.

A specially developed fabric belt provides the support and the electrical conductivity; the lights are attached in an intuitive way using a clip-and-connect system. **Plusminus** eliminates the differences between pendant, sconce and floor lights, because the various elements of the collection can be adjusted, attached or removed as required.

The separate elements of the lighting system are articulated in such a way that elevates the functional to become a feature in the space, becoming part of the architecture. There are six different sources that give the lighting its specific characteristics when attached to the fabric belt: sphere, semisphere, cone, spotlight, linear diffuser and linear low UGR. A series of anchors and fixings maintain the desired configuration of the belt with the attached lights which in themselves are an attractive addition to the overall installation.

The common thread of the **Plusminus** collection is the specially developed fabric belt that can be easily adapted to create all sorts of lighting installations. The belt is available in four color finishes within the **Vibia** color palette.

Plusminus is a toolkit for lighting solutions, equally suitable for creating intimate lighting in the home or elaborate light sculptures in public buildings. When loose, the belt traces elegant compositions within the desired space. Tension in the belt creates and acquires an architectural presence that can function as a space divider or artistic installation in vertical configurations. Used horizontally, the system suggests a suspended ceiling with light sources delimiting the height. Add a wire cable attachment, any number of configurations become possible.

Using the intuitive software and expertise provided on www.vibia.com designers are given the opportunity to work with pre-set configurations or come up with their own bespoke lighting solutions.

About Vibia

At Vibia we are working towards improving people's lives, helping them create and enjoy the best spaces for living and working. Our aim is to lead the way in new lighting design, going beyond light in fact. Thinking about lighting as a way of creating spaces and ambiances that makes an impact and evokes sensations in addition to having a positive effect on people. Design beyond light.
