

Luxxbox Launches Georgina Acoustic Pendant

The Sculptural Acoustic Pendant Adds a Touch of Softness and Luminosity to Interiors

Luxxbox, a leading international designer of acoustic and flexible solutions, is excited to introduce Georgina, an elegant acoustic pendant offering powerful noise absorption capabilities with a large dome structure, soft crisscross pattern and intricately designed glass diffuser.

Inspired by a design from the Luxxbox archives, Georgina reinterprets the iconic Flotte Lantern's crisscross pattern into a modern acoustic pendant. Originally designed in 2017, the Flotte Lantern's sensual curved design and soft, delicate white glow referenced floating paper lanterns. Georgina has revived the Flotte Lantern into a new diffused glass form and coupled it with a large domed acoustic shade echoing the same crisscross pattern. Together, the juxtaposition of the glass diffuser and textured acoustic shade creates a beautiful, timeless acoustic pendant.

With its generous dome shape and flowing expression, Georgina is a striking acoustic pendant suitable for commercial interiors. The elegant fixture is fashioned from a sturdy, lightweight PET dome yet has a delicate, floating quality. The pattern and curve of the pendant soften the design while the large acoustic shade provides highly effective acoustic absorption. Georgina pleasantly zones open areas and creates calming, comfortable spaces.

Georgina comes in one size and offers a neutral marled grey tone to suit any interior. Available with height-adjustable 9'3m black suspension cables, the fixture can be grouped and hung at alternating heights to create a unique display that increases acoustic coverage. For illumination, select from the

intricately designed glass diffuser with LED light source, or opt for the softer E26/E27 lamp holder option. The shade is crafted from PET material manufactured from recycled plastics. Similar to all of Luxxbox's product portfolio, Georgina is fully recyclable at the end of life.

“When designing Georgina, we wanted to create a unique acoustic pendant that combines organic form and robust functionality at a modest price,” said Jason Bird, Founder and Creative Director of Luxxbox. “Our innovative thermo-form process allows us to take acoustic lighting in a whole new direction, creating beautiful new shapes while also minimising the required labour. The end result is a striking acoustic pendant that is also competitively priced.”

Quality space and noise-management solutions make for happy environments. Luxxbox's acoustic lighting, baffles, and furniture products turn down the volume to increase productivity, creating happy, healthy workspaces the world over. To learn more about Luxxbox, please visit www.luxxbox.com.

Taglines

- Elegant form, soft light | A soft radiance
- A beautiful, timeless acoustic lighting fixture at a modest price.
- For calming and comfortable space.
- Refined minimalism, robust functionality
- Softness and luminosity
- The design draws from elemental, organic shapes

Alternative copy - Designed by Alberto Pasquale - Inspired by George Nelson Lamp

A sculptural acoustic pendant with a flowing crisscross pattern, the Georgina adds a touch of softness and luminosity to interiors. Designed by Alberto Pasquale for Luxxbox, the elegant fixture is fashioned from a sturdy, lightweight PET dome yet has a delicate, floating quality.

Pasquale was inspired by a set of Georg Nelson Lamps, wanting to translate their elemental, organic shapes into a modern acoustic pendant for commercial interiors. Infusing his Italian design sensibility with Luxxbox's manufacturing expertise, Georgina is fashioned using a thermoforming process to create a beautiful, timeless acoustic pendant at a modest price.

With its generous dome shape and graphic expression, Georgina is as visually appealing as it is practical. The elegant fixture is fashioned from a sturdy PET acoustic shade, yet has a delicate, floating quality. Inspired by nature, the flowing crisscross pattern meanders across the shade and glass diffuser, giving the pendant its recognisable but inimitable shape.

Georgina's unique lampshade is constructed using a thermo-form process to heat and mould the dense acoustic materials, creating a large dome structure that works effectively to lower the volume and zone open areas. The fixture is then finished with the fine-crafted glass diffuser, echoing the same soft bisecting pattern, and emitting a smooth, translucent glow. The end result is a striking acoustic pendant with a beautiful, timeless design and highly effective noise absorption at a modest price.

Available in 2 sizes and supplied with height adjustable 9/3m black suspension cables, Georgina's can be grouped and alternated to create a unique display that increases acoustic coverage. The neutral tone evokes a feeling of tranquillity and offers a clean base to compliment any interior. For illumination, select between the patterned glass diffuser with LED light source, or opt for the softer E26/E27 lamp holder option. The shade is crafted from PET material manufactured from recycled plastics. Similar to all of Luxxbox's product portfolio, Georgina is fully recyclable at the end of life.
